

Assignment 1: Simple web page

Build a web page that looks as similar as possible to the one in the screenshot at <https://manifold.open.umn.edu/projects/web-programming/resource/example-bank-1>. The title of the page (which is not shown in the screenshot) should be `First Bank of HTML`.

Method

You may only use HTML without recourse to any external CSS stylesheets or JavaScript libraries. Your web page should validate without warnings or errors at the W3C online validator (accessible via the developer console).

You may refer to online resources and books, but you must not share your work with others.

Useful information

- (1) The trademark symbol (®) is Unicode 2122 (in hex).
- (2) The non-default colors in the page are `lightGreen` (the big table), `beige` (the smaller embedded tables), `red` (the italicised terms), and `yellow` (the "under construction" note).
- (3) You may tie CSS to classes or you may use explicit `style` attributes.
- (4) The web page must be self-contained, with no references to other files.
- (5) The web page may not use JavaScript.

Turn in

Turn in your web page (a single file called `bank.html`) via Canvas.
